

PANDA CLOUD PROTECTION

Simply... *Evolution*

Panda Cloud Protection lets companies forget about the antivirus and simply subscribe to a complete security service.

Panda Cloud Protection is an innovative service hosted by Panda Security and managed by security providers, delivering uninterrupted, hands-free protection for endpoints and email.

Small and medium-sized businesses face the same security problems as large companies, yet are unable to dedicate the same resources to IT security. They need the help of professionals to secure their networks. By offering a cloud-based security solution such as Panda Cloud Protection, service providers can meet these market demands and provide **added value**. The Service Provider Web console offers **centralized security management**, while **reducing operational costs and increasing business opportunities**.

Panda Cloud Protection includes cloud-based, anti-malware and firewall protection for **endpoints**, and anti-spam and malware protection for **email traffic**. Clients' security is easily managed from an intuitive Web console.

PANDA CLOUD PROTECTION optimizes resource consumption and requires no client-side infrastructure. It is extremely light as all operations are performed in the cloud.

PANDA CLOUD PROTECTION delivers the fastest protection against the latest viruses and spam, thanks to cloud-scanning run on PandaLabs' servers.

PANDA CLOUD PROTECTION is truly easy-to-use. Just subscribe to the service and the Web console provides effortless access to all network and email security information anytime, anywhere.

Main benefits for Partners

Remote installation and management of all customers

The Web console enables centralized installation and management of all clients' protection and monitoring of their license status, with no need to go on-site.

Management service offered as an added value

Service providers can offer management services as an added value. Periodic executive reports can be sent to end-customers by email to demonstrate the value of the management service.

MSSPs can supervise their resellers

MSSPs can supervise their resellers and distributors in the sales process. Enhanced profile management features enable privileges to be assigned according to their roles.

Complete security monitoring

Clients can consult their security status at any time, while the Partner console offers a similarly comprehensive overview.

Complete and transparent protection for end-users

They won't even notice their antivirus is running.

Service Provider Web Console

Allows single-sign-on access to manage all customers and enables a well-organized n-tier level partner and end-client structure.

Customizable reports in your client's inbox

Automated scheduling of executive reports sent to customers periodically by email.

Peer-to-peer automatic updates

Workstations and servers update and upgrade their protection from the nearest desktop, optimizing bandwidth consumption. If the update package is not found on the LAN, the workstation will get it from Panda across the Internet. Update frequency can be also configured, and updates can be launched on-demand or by groups.

Profile-based protection

Different policies or protection profiles can be assigned to different users, groups of users or domains according to the organization's needs, thereby saving valuable time for administrators.

Console customization

Service providers can upload their logos to appear next to the Panda Security logo in the Service Provider and Client consoles.

Client	Group	Type	Contracted	Used	Expire	Outdated protect.	Outdated signatures	With errors	Today's detections
East	East	Release	5000	2234	12/31/2009	0%	7%	3%	125
East	East	Release	2000	26855	12/9/2011	0%	1%	2%	3
East	East	Release	2000	0	12/30/2011	0%	0%	0%	0
East	East	Release	6	0	3/23/2009	0%	0%	0%	0
East	East	Release	6	1	3/28/2009	0%	0%	0%	0

Priority	Conditions	Action	Active	Edit
1	Apply to emails where the field Contains support@pandasecurity.com	Send email to info@pandasecurity.com	<input checked="" type="checkbox"/>	

Having a Web console to manage all our clients remotely, greatly helps us to administer our clients' protection. The protection is so light it goes unnoticed by end-users. We can schedule sending of reports with our logo to clients as evidence of the management service. Our clients can enjoy the peace of mind of knowing that SAGE takes care of everything.

Santiago Solanas, Managing Director
SAGE Spain

Panda Cloud Protection is an ideal Software as a Service tool for IT departments and managed service providers like us. We can manage and report to our clients from virtually anywhere from the centralized Web console, performing updates as long as there is an Internet connection. I am absolutely confident Panda Security has the best protection in the market with the most reliable technical support available.

Johnerick Cintrón, Network Engineer
Strategic Network Consulting

Flexible installation

There are several protection deployment options: remotely, through emails with a download URL, and, to avoid user intervention, it can be deployed transparently to selected endpoints through a distribution tool.

A wide range of uninstallers is also available.

Management delegation

Panda Cloud Protection enables administrators to delegate or share administration tasks between other privileged users, specifying the computers to which they can have access.

Highly effective spam filtering

Its Guaranteed Filtering mode ensures effective filtering, optimizing bandwidth and company resources and reducing time dedicated to spam management.

Email quarantine management

The Panda Cloud Protection quarantine area stores all mail with spam or potentially containing viruses. This ensures that the end-client's servers are not saturated by spam, saving resources and capacity.

24x7 guaranteed availability

The system architecture offers load-balancing and redundancy, and is designed to offer maximum availability. Providing 24x7 support, it ensures an uninterrupted endpoint protection and clean mail delivery service: 24 hours a day, 7 days a week.

Every single installation of Panda Cloud Office Protection results in extremely satisfied customers...

The comprehensive Web management console for MSPs allows me to centrally install, manage, and update security licenses on every end-device across my entire customer base, without the need to be physically present at the customer site.

Roy Miede, CEO
