

Panda Cloud Protection lets companies forget about the antivirus and simply subscribe to a complete security service. Panda Cloud Protection is an innovative service hosted by Panda Security and managed by security providers, delivering uninterrupted, hands-off protection for endpoints and email.

With Panda Cloud Protection, companies reduce security investment on hardware, software and IT personnel down to an affordable service fee, as all infrastructure and solution maintenance is in the cloud and can be easily managed from a Web console.

Concerns...

SOHO

Save time and reduce your investment in security with Panda Cloud Protection. Easily manage the security of your computers.

SMB

Dedicate your IT resources to your core business; leave security in the hands of experts with a minimal, predictable cost. Avoid mail server downtime.

DISTRIBUTED OFFICES

Manage the security of your mobile teams from a single point, knowing they are always protected.

LARGE

Subscribe to a global security service and control security of all systems: PCs, laptops and servers from a Web-based console, anytime. At the same time protect your email from spam and viruses and save time spent by IT staff on security.

KEY BENEFITS	FEATURE	WHAT YOU GET...
Robust protection	<ul style="list-style-type: none"> Leverages Panda Security's Collective Intelligence 	-The security service delivered to the user takes advantage of collective resources and information which can be accessed through the Internet. Signature files are constantly and automatically updated from the cloud so you will have permanent, state-of-the-art protection.
	<ul style="list-style-type: none"> Vulnerability and threat assessment 	-Panda Cloud Protection includes Malware Radar, a tool which offers the highest detection rates.
	<ul style="list-style-type: none"> Highly effective spam filtering 	-Guaranteed Filtering mode ensures effective filtering, which is highly recommended since 95% of email is spam. Email traffic on the network is reduced in real time and optimum protection levels are maintained even during email traffic peaks.
	<ul style="list-style-type: none"> Proactive protection 	-Proactive protection technology automatically detects and blocks suspicious files without the need for signatures. Every suspicious file is checked against Panda Security's Collective Intelligence. This allows Panda Cloud Protection to exponentially increase the malware it can detect and ensures proactive anti-malware protection for endpoint and email.
Optimized costs and resource consumption	<ul style="list-style-type: none"> Security as a Service 	- No infrastructure investment in hardware, software, or specialized personnel is required as everything is hosted in the cloud. You only subscribe to the service and let others manage your security.
	<ul style="list-style-type: none"> Avoids non-productive traffic in perimeter and deals with email quarantine 	-Non-productive email traffic will be eliminated at the perimeter, minimizing server workloads. The quarantine area, hosted in Panda Security servers, stores all mail with spam or potentially containing viruses. This ensures that your servers are not saturated by spam, saving resources and capacity. Your IT staff will no longer spend time in the cumbersome task of email security maintenance.
	<ul style="list-style-type: none"> Benefits from Cloud Computing 	-No investment in resources, since all technology is hosted in the cloud. Plus maintenance costs do not fall on the user, since it is taken care of by the service provider.
	<ul style="list-style-type: none"> Peer-to-peer automatic updates 	-Workstations and servers update and upgrade their protection from the nearest desktop, optimizing bandwidth consumption.
Facilitates installation and management	<ul style="list-style-type: none"> Managed via single Web-based console 	-Security can be managed anytime, anywhere from the Web console; only a Web browser is required. This allows centralized monitoring of all email traffic and endpoints, including mobile laptops and workstations in remote offices.
	<ul style="list-style-type: none"> All updates are performed automatically and totally unattended 	-You don't need to worry about updates and maintenance tasks. Your service provider will take care of maintenance, and you will benefit from uninterrupted hands-off protection with the latest technologies.
	<ul style="list-style-type: none"> Flexible installation 	- Installation is effortless, automatic and/or remote, and can be pushed out from a single, central point. Deployment can be deployed remotely, through emails with a download URL, without user intervention. An MSI installer is also available for distribution of the protection.
Improves risk management	<ul style="list-style-type: none"> 24x7 guaranteed availability 	-The system architecture offers load-balancing and redundancy, and is designed to offer maximum availability. You will have uninterrupted endpoint protection and clean mail delivery service: 24 hours a day, 7 days a week.
	<ul style="list-style-type: none"> Monitoring and reporting 	-On-demand and scheduled network scans, with real-time monitoring of results. Reports are fully customizable, detailing protection status and detection activity.

TARGET	CONCERNS		
SOHO	Limited budget	Have you calculated the real cost of your current solution?	Because Panda Cloud Protection is hosted at Panda Security, it minimizes investment in hardware and resources.
	No specialized resources / Lack of IT department	Does your current security solution guarantee 24-hour highest protection level?	Panda Cloud Protection is constantly being updated and relies on Panda Security structure. Therefore it can guarantee optimal protection levels for your systems.
		Would you like someone else to take care of your security?	Panda Cloud Protection is a Web-based service. This allows easy externalization of the protection when needed.
No technical expertise	Is your current solution easy enough for you to manage without the help of a specialist?	Installation and updates are transparent and really easy to perform. The Web console provides easy management of security in all devices.	
SMB	Limited budget	Have you calculated the real cost of your current solution?	Because Panda Cloud Protection is hosted at Panda Security, it minimizes investment in hardware and resources.
		Would you like to invest your IT resources only in your business?	With Panda Cloud Security you will only have to deal with the predictable cost of the license. No need for extra expenses on hardware or specialized personnel.
	Low visibility of security in whole company	Can you check on your security, no matter where you are?	The Web console allows you to check on the status of all computers from any Internet connection.
	Lack of flexibility to manage security	Can you install or modify your current solution from home, transparently for the user?	Panda Cloud Protection can be installed in the background without disturbing the users and affecting company productivity.
	Email servers overload	Does your company have email servers to worry about?	Panda Cloud Protection offers you the "Guaranteed mode" of email filtering. It assures effective spam filtering while optimizing resource and bandwidth consumption.
Own domain email traffic saturation	Does your company have its own email domain?	Panda Cloud Protection avoids inoperative traffic in the perimeter.	
DISTRIBUTED OFFICES	Low security coverage when outside main offices	How do you manage the security of your mobile devices?	The security of your company's equipment can be controlled via the Web console, even while outside the office.
		Are your mobile devices always protected?	Panda Cloud Protection protects mobile devices performing upgrades every time they connect to the Internet.
LARGE ACCOUNT	Email servers overload	Does your company have email servers to worry about?	Panda Cloud Protection offers you the "Guaranteed mode" of email filtering. It assures effective spam filtering while optimizing resource and bandwidth consumption.
	Own domain email traffic saturation	Does your company have its own email domain?	Panda Cloud Protection avoids inoperative traffic in the perimeter.
	Maintain high productivity levels	Are you aware of the resources each device dedicates to your traditional antivirus?	Panda Cloud Protection is Security Service hosted in the cloud. This reduces considerably the load on the device, guaranteeing the maximum security level with minimal resource consumption.
		Does your IT staff spend too much time in email quarantine management?	The quarantine zone in Panda Cloud Security stores all spam emails and possible viruses. The mail in the quarantine can be managed, validated or deleted from a small application called the "Notifier", without having to enter the control panel.
	Exhaustive security controls	Are you getting a total protection service?	Panda Cloud Protection assures 24x7 service availability.
	Loss of critical/sensible information	Email communication is mission critical. Are the emails being safely archived?	You don't need to worry about outages or downtime; your email is archived for 10 days.
